

Women Owned Supplier of the Year Award

Precision Communications, Inc. (PRECOM) was honored by the Siemens Wind Division with the Women Owned Supplier of the Year Award.

PreCom serves the Optical Controls industry and was founded in 1993 in Boise Idaho by Heidi Woodhead. PreCom has earned a reputation for designing and building reliable custom optical cable solutions in support of the energy industry and providing dependable service with a score of 100% on-time delivery.

For almost a decade PreCom has been delivering defect free products to the Americas region and has contributed to the successful operation of up to 2200 Siemens wind turbine SCADA systems.

Siemens Engineering and Projects colleagues have described PreCom as a “value-added” supplier. We carefully listen to requirements; validate for appropriate design specifications to address the application and make effective recommendations and build prototypes prior to production. This extra attention to detail has, on several occasions, ensured that incorrect material was not delivered to the project sites – saving time and money for Siemens Wind Power.

Recently PreCom successfully expedited a large very last-minute order from Siemens Wind Power's Hutchinson plant and a one of a kind order for an acoustics testing interface kit that was needed to meet a critical testing schedule.

Siemens Wind Power appreciates all the hard work Heidi and the PRECOM team have done to meet Siemens’ requirements over the years!
