Jim Woodhead  
PRECISION COMMUNICATIONS  
1400 E. Watertower St.  
Meridian, ID 83642

To Whom It May Concern:

Precision Communications has worked at Micron Technology's main site and several auxiliary sites since 1993. During my tenure as Senior Communications Engineer for Micron, I have had several years working with professionals at Precision Communications. Jim Woodhead and his technicians have performed all types of structured cabling projects from basic CAT5e and CAT6 office environment installations to lengthy building to building fiber-duct and optical cable installations. Precision Communications have effectively completed small re-cabling jobs, in sensitive production areas and large-scale new construction installations for Micron for many years.

The team at Precision Communications has impressively terminated large-count, single mode and multimode optical fiber installations to our specifications with zero percent failure rate.

Precision Communications has consistently and professionally completed projects within budget and on time even when the completion date seemed unreasonable and the change orders overwhelming while offering suggestions to meet the deadlines.

As a result of the reasons stated and their commitment to customer satisfaction, I have no reservations recommending Precision Communications for any intercampus communications project.

Sincerely,

*Ken Eck*
